                                                                                                                                                                                                       The present sequence is an alternative primate interleukin-1 like molecule, designated IL-1-zeta. The 12 beta strands indicated in the features table, fold into a beta-trefoil fold. The specification claims an isolated or recombinant polypebtide that: (a) specifically binds colyclonal antibodies generated against at least a 12 consecutive amino acid segment of IL-1-zeta (see AAY91884) or its allelic variant (see AAY91885); and (b) comprises at least one sequence selected from: AAY91886-903 or AAY91904-06. The preferred 12 consecutive amino acid segment is chosen from AAY91907-18 or AAY91919-21. IL-1-zeta is likely to play a role in systemic inflammatory reactions, such as fever, hypoglycemia, reduced plasma iron and zinc, the acute response of the live, and increase plasma copper. IL-1-zeta binding compounds (comprising antigen binding sites) and IL-1-zeta polypeptides are also useful for both diagnostic and therapeutic purposes
                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                         ů

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents an interleukin-1 (IL-1)-related polypeptide. IL-1 related polypeptide was isolated from HPB-MLT cells, FERM-BP-2430, an established human T-cell line. IL-1 related polypeptide is useful for inhibiting natural killer (NK) activity, which is related to the immune system of mammals. The DNA encoding the IL-1 related polypeptide is useful in gene therapy of patients in need of NK activity inhibition and others suffering from immunodeficiency
                                                                                                                                                                                                                                                                                                                                                   New human interleukin-1-related polypeptide and polynucleotide, useful for gene therapy and in developing drugs as regulators of natural killer activity, are capable of inhibiting natural killer activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MSFVGENSGVKMGSEDWEKDEPQCCLEDPAVSPLEPGPSLPAMNFVHTSPKVKNLNPKKF

The invention relates to an isolated or recombinant nucleic acid encoding interleukin-1zeta polypeptide. The invention is useful in gene therapy. The composition and methods are useful in diagnosing or treating degenerative or abnormal conditions which directly or indirectly involve development, differentiation or function, e.g. of the immune system and/or haematopoietic cells. The invention may also be used for preventing or treating other diseases or disorders associated with abnormal expression or triggering of response to the interleukin, such as inflammatory disorders, infection, allergies or cancer. The present sequence is human interleukin-1zeta variant.
                                                                                                                       New nucleic acid molecules encoding mammalian interleukin-1 polypeptides, useful for diagnosing, preventing or treating diseases associated with abnormal expression of interleukin, e.g. inflammation, infection or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                   The invention describes an isolated or recombinant interleukin 1 zeta polypeptide (I) that specifically binds to polyclonal antibodies consecutive amino acids segment of two fully defined sequences (S1) and (S2) having 218 amino acids as given in the specification and comprises at least one sequence chosen from (S1) and (S2) having 218 amino acids as given in the specification and comprises at least one sequence chosen from (S1) and (S2). Also described are: a fusion protein comprising (I) or its sequence or sequence of another cytokine or chemokine; a binding compound composition of matter comprising a sterile polypeptide (I) or (II) an antigen binding site from an antibody, which specifically binds to (II), (I) or (II) and a carrier such as an aqueous compound e.g., water, saline and/or buffer, where the carrier is formulated for oral, rectal, cand, (D) that encodes (I) or several antigenic peptides of (S1) or (S2); a cell (IV) transformed with (III); a method of modulating a cell (IV) transformed with (III); a method of modulating a conjust or antigonist of (I); a kit comprising a compartment of (I), (II) or (III) and/or instructions for use or disposal of reagents in the kit; complex. (I) is useful for developing more effective anti-inflammatory complex. (I) is useful for developing more effective anti-inflammatory contractions in the amino acid sequence of a human interleukin I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

The specification describes a method for using a cytokine-1 capable of binding to interleukin (IL)-188P and capable of inhibiting a receptor of a cytokine-2 that is a member of the IL-1 family, in the manufacture of a medicament for the treatment or prevention of a disease which is caused or aggravated by inducing the receptor of cytokine-2. The cytokine-1 is preferably IL-1FD. The receptor of cytokine-2. The cytokine-1 is useful for the treatment or prevention of inflammatory diseases, selected from endotoxin lethality (sepsis), liver injury induced by toxins or activated T cells or hepatitis C, arthritis, lung injury, psoriasis, inflammatory bowel diseases, brain injury, ischaemic injury, cardiac dysfunction, and neuritis, and for preventing metastesis formation. The present sequence represents human IL-1F7b, which is used in the method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Use of a cytokine-1, its isoform, mutein or fused protein, capable of binding to IL-18BP and inhibiting a receptor of a cytokine-2 that is a member of the IL-1 family, useful for treating or preventing inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIHDQDHKVLVLDSGNLIAVPDKNYIRPEIFFALASSLSSASAEKGSPILLGVSKGEFCL 120

                                                                                                                                                                                                                                                       New isolated or recombinant interleukin-1 zeta polypeptide and related reagents such as antibodies, useful for treating inflammatory disease and as probes for diagnosing immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to interleukin-1 zeta polypeptide and polynucleotide. The agonist or antagonist of the interleukin-1 zeta is useful in modulating a cell that is involved in inflammatory response. The peptide fragments of IL-1 zeta are useful in research and diagnostic tools in the study of inflammatory reactions to antigenic challenge and the development of more effective anti-inflammatory therapeutics. Interleukin-1 zeta is useful in regulation and/or development of immune system. A polynucleotide encoding IL-1 zeta is useful for detecting the expression level of the polypeptide in a patient suspected of having an immunological disorder. The present sequence is a human interleukin-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9

The present sequence is that of splice variant TDZ.1 (testis-derived zeta variant) of human interleukin-1 zeta (IL-1 zeta). TDZ.1 mRNA is generated from exons 1, 2, 4, 5 and 6 of the IL-1 zeta locus, and the encoded protein is probably a functional IL-1 like molecule. TDZ.1 mRNA is correspond most strongly in the kidney, skeletal muscle, testis, prostate, covary, colon, small intestine, liver, placenta, lung, tonsil, foetal liver, lymph node and bone marrow. The invention is directed to novel, purified and isolated IL-1 zeta, its splice variants and Xrec2 polypeptides (see AAY95297-301), the nucleic acids (see AAX918-22) colon, such polypeptides, and their uses. The polypeptides can be used to study cellular processes such as immune regulation, cell proliferation, cell magnation, cell interaction and inflammatory cresponses, to identify proteins associated with IL-1 zeta, to screen for potential inhibitors, and to prepare antibodies. In particular, they can be used to activate and/or inhibit the induction of local cissue destruction and fever, inhibit the induction of local cissue destruction and fever, inhibit the induction of local cissue destruction and fever, inhibit the induction of inhibit the colls to screen for vascular endothelial cells to produce IL-6, induction of inhibit the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated interleukin-1 (IL-1) zeta nucleic acids and splice variants TDZ1, TDZ2, TDZ3 and their encoding proteins, useful as probes for identifying genes associated with diseases such as glaucoma, and insulindependent diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MSFVGENSGVKMGSEDWEKDEPQCCLEDPAVSPLEPGPSLPAMNFVHTSPKVKNLNPKKF

The present sequence is the human interleukin (IL)-1 homolog zillad protein. This protein contains a core structure of 12 beta-strands wound into a beta-barrath, with the beta-strands seperated from each other by loops. The loops between these beta-strands are highly variable among the family members and are believed to be involved in receptor binding. The sallad proteins modulate inflammation and other immunological processes and are therefore useful for treatment of arthritis, psoriasis, septic shock, graft-versus-host disease and leukaemia. Other diseases that may be modulated by zillad proteins include cancer, aneamia, inflammatory bowel disease, acute and chronic neuropathologies, shock, respiratory disease syndrome, restenosis and acquired immune deficiency syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SIHDQDHKVLVIDSGNLIAVPDKNYIRPEIFFALASSLSSASAEKGSPILLGVSKGEFCL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                An isolated nucleic acid molecule encoding an interleukin-1-like polypeptide (IL-11p) that retains one or more activities of the peptide from which it is derived, such as the IL-18R binding activity of a human interleukin-1 receptor antagonist-1 (hIL-18A) polypeptide, is new. The nucleic acids may be used in molecular engineering applications, e.g. hybridization assays and chromosome and gene mapping studies, for recombinantly producing the IL-11p polypeptide or for producing gene knock out animals to study the role of the protein in metabolism and cheeses (conversels) gene therapy protocols may be used to supplement a patients production of the polypeptide or to rectify mutations that lead to the production of in active peptides). The peptides produced may be used to supplement apply protein expression and activity which may be use to treat disorders associated with inappropriete IL-11p expression and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polypoptide. The IL-114 polypoptide can be expressed by steadard recombinant methodology. The IL-114 polypoptide polymucleotides and modulators are useful for treating chronic and acute inflammation, septicemia, autoimmune diseases (e.g., inflammatory bowel disease, disease, infection, stroke, ischemia, acute respiratory disease syndrome, allergies, asthma, restenosis, brain injury, AIDS, bone diseases (e.g., osteoporosis), cancer (e.g., lymphoproliferative disease (e.g., osteoporosis), cancer (e.g., lymphoproliferative disease (e.g., polymucleotides are useful as diagnostic reagents and for chomosome identification. The present sequence represents the IL-114 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIHDQDHKVLVLDSGNLIAVPDKNYIRPEIFFALASSLSSASAEKGSPILLGVSKGEFCL 120

The present sequence is a variant of human interleukin (IL)-1 homolog zilla4 protein, consisting of Asp in place of Glu at position 200. The replacement of Glu (200) with Asp results in attenuation of protein inflammation and other immunological processes and are therefore useful for treatment of arthritis, psoriasis, septic shock, graft-versus-host disease and leukaemia. Other diseases that may be modulated by zilla4 proteins include cancer, ansemia, inflammatory bowel disease, acute and chronic neuropathologies, shock, respiratory disease syndrome, restenosis and acquired immune deficiency syndrome. Note: The present sequence is not shown in the specification but is derived from human zilla4 protein sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

New interleukin-1 homolog Zilla4 protein, useful for modulating an immune response and for treating diseases, e.g., inflammatory diseases, cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; interleukin-1 homologue; IL-1; zilla4; immune response;
inflammatory disease; cancer; anaemia; immunomodulator; antiinflammatory;
cytostatic; antianaemic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to the isolation of human interleukin-1 (II) homologues designated zilla4, and the polynucleotide sequences that encode them. The gene encoding human zilla4 is located on chromosome 2. Also disclosed is a method of making these proteins and a method of modulating an immune response. The proteins are useful for treating diseases such as inflammatory diseases, cancer, and anaemia. The present sequence represents human zilla4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MSFVGENSGVKMGSEDWEKDEPQCCLEDPAVSPLEPGPSLPAWNFVHTSPKVKNLNPKKF

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C; Comment: This protein lacks a conventional signal sequence for protein export. Cleavag ved form of interleukin-lbeta, unlike interleukin 1-alpha, is inactive.
C; Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin-la C; Genetics:

A,Residues: 118-269 <DAU>
C;Comment: This protein lacks a conventional signal sequence for protein export. Cleavag
ved form of interleukin-lbeta, unlike interleukin 1-alpha, is inactive.
C;Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin-la
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                interleukin-1 beta precursor - mouse

A)Title: Effects of hematopoietin-1 and interleukin 1 activities on early hematopoietic A;Reference number: A90732; MUID:88184226; PMID:3281727
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A;Contents: annotation; X-ray crystallography, 2.0 angstroms
C;Comment: This protain lacks a conventional signal sequence for protein export. Cleavag
ved form of interleukin-lbeta, unlike interleukin 1-alpha, is inactive.
C;Comment: Interleukin-lbeta precursor is less heavily myristoylated than interleukin-la
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                C;Keywords: cytokine; immunoregulation; inflammation; lipoprotein; lymphokine; macrophag
F;117-269/Product: interleukin-1 beta #status experimental <IL1>

Isoforms D and B were found only in testis and bone marrow. Whereas only isoform A is found in brain, only isoform B in Kidney and only isoform C in heart. INDUCTION: By phorbol ester (PWA) in different cell lines. SIMILARITY: Belongs to the IL-1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and mouse cDNA sequences.";

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Binds to interleukin-18 receptor (IL-18R) receptor but not to IL-1 receptor. Could be a new player in the inflammatory and immune responses mediated by the IL-18/IL-18R axis.

-!- SUBCELLULAR LOCATION: Secreted.
-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MIM; 605510; -. Natl. Acad. Sci. U. S.A. 99:16899-16903(2002).

Proc. Natl. Acad. Sci. U. S.A. 99:16899-16903(2002).

- -- FUNCTION: Is a highly and a specific antagonist of the IL-1 receptor-related protein 2-mediated response to interleukin. I family member 9 (ILIP9). Could constitute part of an independent signaling system analogous to interleukin-1 alpha (IL-1A), beta (IL-1B) receptor agonist and interleukin-1 receptor type I (IL-1B). that is present in epithelial barriers and takes part in local inflammatory response.

--- SUBCELLULAR IOCATION: Secreted.

--- TISSUE SPECTIFICITY: Predominantly expressed in keratinocytes but not in fibroblasts, endothelial cells or melanocytes. Detected also in the spleen, brain leukocyte and macrophage cell types.

--- Increased in lesional psoriasis skin.

--- INDUCTION: By phorbol ester (PRA) and lypopolysaccharide (IPS)

--- SIMILARITY: Belongs to the IL-1 family.

            Nature 420:563-573(2002).
-!- SUBCELLUIAR LOCATION: Secreted (Potential).
-!- TISSUB SPECIFICITY: Highly expressed in embryonic tissue and in tissues containing epithelial cells.
-!- MISCELLANEOUS: Binding analysis failed to detect interaction with multiple ILIR family members.
-!- SIMILARITY: Belongs to the IL-1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   110 LLGVSKGEFCLYCDKDKGQSHPSLQLKKEKLMKLAAQKESARRPFIFYRAQVGSWNMLES
